从前往后一个个枚举即可

```cpp
void solve()
{
    string ss;
    cin >>ss;
    vector<string> a{"CJLU","PKU","THU"};
    vector<ll> cnt(3);
    bool ok = 0;
    ll st = 0;
    for(int j=0;j<ss.length();j++){
        FOR(3){
            if (ss[j]==a[i][cnt[i]]){
                cnt[i]++;
            }
            if (cnt[i]==a[i].size()){
                cout << a[i];
                return ;
            }
        }
    }

    cout << "NO";
}
```
